Cloisonné Hard Fired Enamel

Our Cloisonné pins continue the fine art tradition of glass enameling started in China centuries ago. The pins are made from hand-pouring powdered glass into the recesses of a die struck stamped brass base. The brass can be plated in gold, silver or nickel. After baking at a very high temperature, the glass enamel is sanded and polished to be flush with the metal lines that separate the colors. This gives the pin a smooth, lustrous quality making them prized by collectors. Available colors are limited to a select group of genuine cloisonné glass powders.

Semi Cloisonné

Semi Cloisonné pins are made using the same technique as the Cloisonné, but the recessed spaces are filled with a hard epoxy enamel rather than glass. These pins have all the aesthetic beauty of true classic cloisonné with the benefit of Pantone color matching. The recessed color wells are filled, one color at a time, with an enamel. When completed, the pin is placed into an oven to harden. Finally, the product is then ground to remove any excess enamels and carefully polished.

Size	Product #	250	500	1,000	2,500	5,000

Misty Finish (Stamped without Enamel Colors)

This process is sometimes called Tone on Tone. The pin is die struck and shows off the highly polished metal set against the dull matte or sandblasted textured background.

Die Struck Soft Enamel

For a less expensive version of our Semi Cloisonné pin that has the same look and color options, try our Die Struck Soft Enamel. With this style, a softer enamel is painted into the recesses of the brass die struck base, leaving a relief effect that lets you feel the die struck pattern. Gold, silver or nickel plating is available. Add a clear epoxy done for long lasting durability and a shiny finished look.

Brass Photo Etched Soft Enamel

This process is a good, inexpensive way to show off small details in a pin. This process is most like cloisonné. Instead of being stamped, the impressions are made by acid etching, enabling better, small-detailed reproduction. This process can be used only on brass. A thin wall of brass separates each color. The pin is then baked for durability. PMS color matching is available at no extra charge using this process. This process is available with or without epoxy coating.

Size	Product #	250	500	1,000	2,500	5,000

Silkscreen or Offset Printing on Cloisonné

Pins can also be produced by printing inks directly on a base of metal via silkscreen. The colors are silkscreened on one color at a time. This process works best for solid color designs.

Offset is produced by printing the four primary colors (cyan, yellow, magenta and black) through a silk screen directly on a metal base one color at a time. It works best for reproduction of photography or designs with gradients or color blends.

Iron Stamped Enamel

This production process is similar to the one used in copper stamped pins. It is generally used for large quantity orders because of the economic cost of iron. The iron stamped pin is brass plated. Epoxy coating is also available with this process.
